DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1-5, 7-11, 14-19, 22-23, 26-28, 31 and 34-37, are rejected under 35 U.S.C. 102(e)

as being anticipated by Feagans, US. Pat. No. 6,360,281.

3. Claims 1, 7-11, 19, 23, 26, 28, 31 and 34, Feagans teaches a multi-function interface for interfacing a wireless modem with a host [abstract], the multi-function interface including a plurality of logical devices [communications port 20 and status port 22 of Fig. 2] associated with the wireless modem such that the plurality of logical devices provide connectivity between the modem and the host, wherein the plurality of logical devices includes a first logical device to provide communication between the wireless modem and the host [communications port 20 of Fig. 2] and the plurality of

Art Unit: 2182

logical devices includes a second logical device [*status port 22 of Fig. 2*] to provide real time status information of the wireless modem to the host during operations [*abstract*].

4. Claims 2-3 and 14-17, 22, Feagans teaches the first logical device is a communication port [*communications port 20 of Fig. 2*] and the second logical device is a status port [*status port 22 of Fig. 2*].

5. Claim 4, Feagans teaches the status port provides the real-time status information as the communication device is on-line [*abstract*].

6. Claims 5 and 27, Feagans teaches wireless modem is a PCMCIA card [*col. 6, lines 26-27*].

7. Claim 18, Feagans teaches the second logical device transmits IP based and non-IP based applications [*see Figs. 1-4*].

8. Claims 35-37, Feagans teaches the status information is provided to the host while communicating with the wireless NIC, while the wireless NIC receiving data from a remote device or while there is no wireless network connection between the NIC and the remote device [*abstract, col. 2, lines 6-48*].

Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

10. Claims 6, 12-13, 20-21, 24-25, 29-30, 32-33, 38-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feagans, US. Pat. No. 6,360,281.

11. Claims 6, 20-21, 32 and 33, Feagans fails to teach using FPGA. However, FPGA are well known in the art.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teaching of Feagans to include FPGA, because FPGAs having advantages including quick design and modification turn-around and reconfigurability.

12. Claims 12-13, 24-25, 29-30, 38-42, Feagans fails to teach the status information includes signal strength, the temperature, connection status, operational condition of the communication device.

However, these features are well known in the art as admitted by Applicant [*see the specification of the instant application, pages 2-3*].
